

1: Open ATLAS – Videos

2: Select either YouTube or Vimeo depending on where you are hosting your playlist:

Choose Video Type:*

Youtube

Vimeo

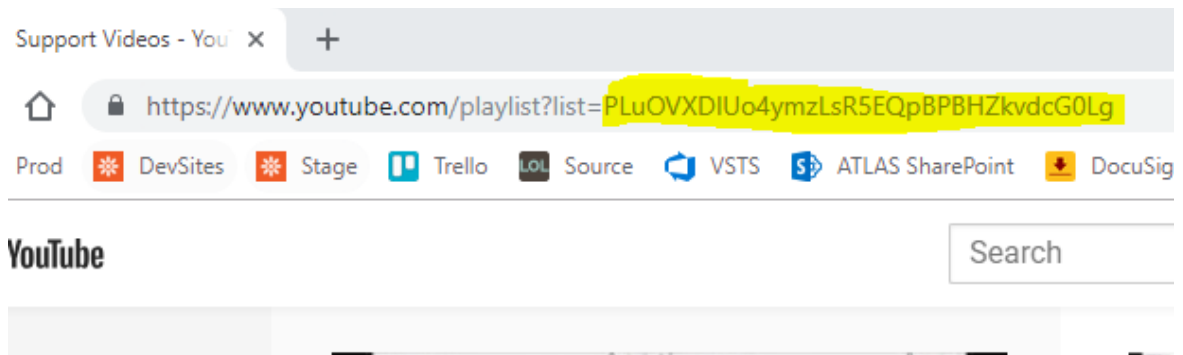

YOUTUBE:

3: After selecting YouTube, new fields will appear. The only required field is the Playlist ID.

Feature Video Title: This is the title above the larger videos

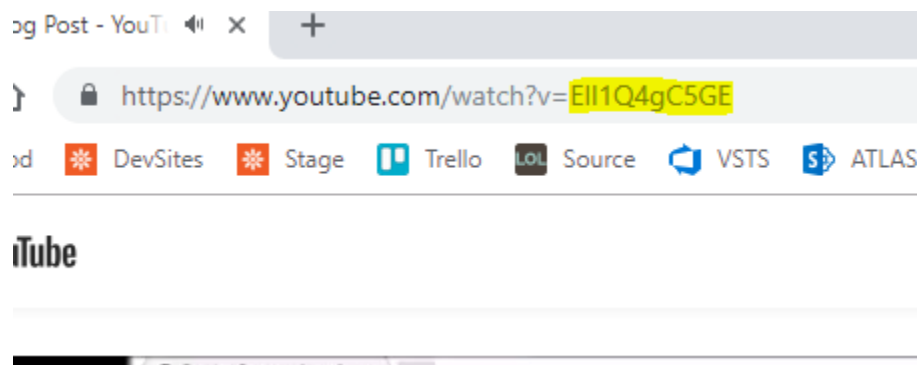

Videos Title (Recent Video): This is the title that goes above the side bar

Playlist ID: Find the playlist ID in the URL of the playlist on YouTube:

The playlist ID is everything after the = sign in the URL. Copy and paste this into the Playlist ID field.

YouTube Feature Video ID: If you would like a certain video to always be the video featured in the larger view, you can use the video's ID to keep it Static. The video's ID can be found in the URL, it is everything after the = sign, copy and paste this in the field.

Top N: This refers to the number of video you want visible. This takes in account both the larger video & all the side videos. So if you type "4", there will be 1 main video and 3 side bar videos.

Widget Container: Make sure the widget container is filled out. If there isn't anything in there, type ATLAS-Videos in the box.
