

EXPLODE™

Determine what level of Paylean® to feed.
(remember all pigs are different)

- 4.5 G level for average daily gain
- 9.0 G level for improved gain and carcass (muscle)

Determine length of time to feed Paylean®

Improved growth rate 4.5 G for 3-4 weeks
Max improved growth rate and muscle 9 G for 3-4 weeks
For pigs being limit fed 9 G for 2-3 weeks
For pigs who need maximum growth feed 4.5 G for 3 weeks
followed by 9.0 G for two additional weeks

Determine how much Explode® to feed/pig/day.

For 9 gram Paylean® level:

- **Hand Feeding:** 5.5 lbs of show feed with 0.5 lb of Explode
- **Free Choice:** Mix 4.5 lb of Explode with 50 lbs of show feed and place in self feeder.
- If feeding different amounts of feed or different levels (see back side of this card)

**Remove Explode® (Paylean®) from the feed
12 hours before transporting.**

- Paylean may cause an elevated respiration rate and cause some pigs to be agitated.
- Removing Paylean from the feed will lower stress prior to transport and changing environment.

(optional)
Consider feeding inMotion when feeding Paylean®.

- In Motion is a natural supplement that provides nutritional support for connective tissue health, specifically articular joints, and the skin.
- Pigs will grow faster and put down more muscle when fed Paylean which can add stress to the joints.

The appropriate concentration of Paylean® is 4.5 to 9.0 g/ ton. For increased rate of weight gain, improved feed efficiency and increased carcass leanness in finishing swine, weighing not less than 150 lbs, fed a complete ration containing at least 16% crude protein for the last 45-90 lbs of gain prior to slaughter.

There is no withdrawal period for Paylean® prior to slaughter.
